Understanding, studying, and promoting insects

Structure : Hoplia Entomology Club

Condat-sur-Vézère New Aquitaine

The goal of this initiative is to raise awareness about, study, and celebrate insects—these tiny creatures that are essential to the balance of our ecosystems, yet often overlooked.

Nature Walk: During a leisurely stroll, we'll take the time to observe and search for the small creatures that inhabit these sunny hillsides: butterflies, beetles, wild bees, and many other species that are discreet yet essential to the functioning of ecosystems.

Open to everyone, this walk focuses on observation, discussion, and discovery, in a friendly atmosphere and at a pace suited to everyone.

To further our observations, three specimens belonging to three different species—which could

not be identified directly in the field—were collected. They will be the subject of a future identification workshop, using binocular magnifiers and identification guides, thereby helping to complete the site's inventory.

Observations made by members:

5,271 OBSERVATIONS

1,531 SPECIES

914 IDENTIFIERS
