#farm

A nurturing third place and educational farm

Structure : Happy Cultors

Le Buisson-de-Cadouin

New Aquitaine

Through this educational farm and community food hub project, we have several objectives:

To embody inspiring and sustainable agricultural and food solutions (organic plant nursery, seed production, diversified orchards using syntropic agriculture, eco-grazing, composting, food processing workshops, and infrastructure to promote biodiversity and to harvest and store water and energy).

To centralize the agricultural, educational, and community activities we've been developing since 2020, along with many other events!

Create a "third place" by sharing our workspace with other professions (artisans, artists, farmers with specialties different from those we develop within the association).

Create a welcoming space conducive to exchange, cooperation, social and intergenerational connections, and cultural events (a project to create a social hub hosting diverse workshops for other local organizations and associations)
