A PRACTICAL GUIDE TO HOME COMPOSTING

Structure : SIVOM

Each of us wants to do our part to help the environment

Why not start with home composting?

Reducing the volume of household waste that needs to be processed by the municipality, enriching your garden at no cost... the benefits are numerous.

Producing your own natural soil amendment and using it directly in your garden isn't just for experienced gardeners—it brings real personal satisfaction. It's a great way to become more aware of the life cycle of organic matter and the beneficial transformation of waste.

What types of waste can be recycled through composting?

Virtually all organic waste: vegetable peels, food scraps, yard waste, etc.
