#forest

A rural third place dedicated to food production and agroforestry, promoting life, ecological transition, and respect for people

Structure : THE POSSIBILITY

LAPOUYADE | New Aquitaine

A third place dedicated to sustainable farming and agroforestry, promoting life, ecological transition, and respect for humanity

A place for experimentation, innovation, and endless possibilities, La Possiblerie is taking root on a former vineyard property in the Gironde region.

In 2018, it was acquired by about a hundred members from across France. 670,000 euros were raised to launch the project.

Now a third place, La Possiblerie focuses on initiatives with high ecological and social value. Over the years, farmers, artisans, and entrepreneurs have taken over the site to create, innovate, experiment, and test models for the future.

OUR ACTIONS AND AMBITIONS:

- Plant innovative vineyard plots that incorporate permaculture by combining vines with trees and food crops.
- Continue the agroforestry initiative launched in 2018 at La Bardonne. By 2028, between 500 and 600 meters of hedgerows will be planted on the plots
- Create wildlife habitats such as birdhouses, brush piles, bat roosts, etc., at the heart of this sanctuary dedicated to biodiversity.
- Play an active role in transforming agricultural practices by increasing training opportunities, educational events, and the promotion of La Possiblerie's values.
- Strengthen our commitment to renewable energy by becoming a solar power producer.
- Prioritize eco-construction for new buildings and renovations.
