Interactive exhibits for school groups and the general public, offering an immersive experience of the coastal and marine world

Structure : Malle de Mer (Kimiyo)

Occitanie

The main goal is to raise public awareness of the threats facing water resources and the marine environment in order to understand the various ways to preserve this environment.

The main goal of the educational kit is divided into several learning objectives:

- 1. Understanding the formation, evolution, and management of the coastline (erosion)
- 2. Discover coastal and marine biodiversity
- 3. Study the impacts of climate change on the world's various bodies of water
- 4. Immerse oneself in the world of coastal and marine research

The activities in the kit can take the form of workshops or exhibits and are designed for school groups, the general public, and tourists. The activities include experiments and games to help the public gain insights through hands-on exploration and fun!

Activities included in the kit

- Water Bar: The Taste of Ions
- Posidonia seagrass beds

- The mysteries of coral
- Coastal Stories
- But who was here?
- The Ocean and Climate Change
- A Little Fishing with a Net
- Treasure Beach
- Plastic in the Oceans
- Water resources
- Secrets of Shells
