AN ECONOMICAL AND ECO-FRIENDLY ALTERNATIVE: INSTALLATION, MAINTENANCE, AND RENTAL OF DRY TOILETS

Structure : NIGLOO

Grand Est

Since 2014, the NIGLOO Association has been offering an economical and eco-friendly alternative through the installation, maintenance, and rental of dry toilets. Dry toilets enable the NIGLOO Association to self-fund a “Matosthèque” (*a shared tool library and space for exchanging knowledge*).

Who is it for?

For all your events: Weddings, festivals, trade shows, sporting events, construction sites, and any other activity.

How? Several packages are available

- Complete Package
- Economy Package
- Basic Rental Package

SERVICE AREA:

From Alsace to the Grand Est region and throughout France.

How the toilets work: Dry toilets remove urine and feces without using water, but instead use dry plant matter, which transforms waste into compost.

No Water

Waste A single flush accounts for 25 to 40% of our water consumption. Every day, 30 to 40 liters of drinking water are used to flush away our waste.

This drinking water must then be treated, which requires energy consumption by wastewater treatment plants.
