THE ECO HABITAT NETWORK WORKS TO COMBAT ENERGY POVERTY IN THE MOST VULNERABLE HOUSEHOLDS

Structure : Eco-Habitat Network

Clairoix

Hauts-de-France

By providing hands-on support to low-income individuals—including families and often elderly, isolated people with limited social connections—who face energy poverty in their homes, Réseau ECO HABITAT helps carry out home improvement and renovation projects.

Réseau ECO HABITAT is a network coordinator that brings together community organizations, tradespeople, local governments, and funders to combat energy poverty. Through a collaborative approach, we create sustainable solutions for healthy, energy-efficient homes that are worthy of their residents.

Our support mission:

As the network leader, Réseau ÉCO HABITAT facilitates and coordinates an ecosystem of stakeholders committed to combating energy poverty. We equip, train, and support our partners

(nonprofits, businesses, local governments) to strengthen their local impact.

1. Support for families provided by a trusted third party and by Réseau ECO HABITAT coordinators
2. Identifying the family's renovation needs
3. Mobilizing all relevant stakeholders to bring the project to fruition
4. Use of bio-based materials
5. Long-term energy savings

Our initiatives

- 264 families supported by our association
- 145 projects completed
- 64.1% average energy savings
- 4.3 fewer tons of CO₂ emissions per renovated home
- €74,843 average cost (including tax) of work per home in 2023

Réseau ECO HABITAT is recognized as a "Mon accompagnateur Rénov'" and "Mon accompagnateur Rénov' renforcé" by the National Housing Agency.
