#agroecology #installation

Helping farmers get started by establishing agroecological farms: supporting the next generation of farmers through community-based land cooperatives and the La Grange platform

Structure : FEVE

Bordeaux New Aquitaine

Our Mission

To help farmers get started by establishing agroecological farms across the region—farms that strengthen our food sovereignty and respect nature and biodiversity—and thereby help transform the French agricultural model, one farm at a time.

Our Commitment

Because the FEVE project is first and foremost social and human-centered, Fermes En ViE is a mission-driven enterprise within the Social and Solidarity Economy.

Our purpose is to accelerate the agroecological and food transition while respecting people and the environment.

- enable farmers to make a better living from their work
- revitalize or sustain rural economic activity by creating value locally
- to reduce agriculture’s impact on natural resources, soil, and biodiversity
- to offer high-quality, healthy, and locally produced food
