BUILDING A CITIZEN-LED TECH COUNTER-MOVEMENT

Structure : Data for Good

Harnessing technology for the common good while challenging the hegemony of the ways of thinking that gave rise to it: this is the fine line we aim to walk to ensure that digital technology serves as a force for empowerment.

Across three major themes:

Climate and biodiversity

Combating overfishing and the expansion of fossil fuels, protecting forests from clear-cutting and wildfires, and ensuring transparency regarding the environmental impact of food production and animal suffering. Protecting our health.

Social Justice

Facilitating the social integration of refugees and providing aid to people in precarious situations, combating cyberviolence and advocating for women's rights, fighting social inequalities and racism.

Democracy and citizenship

Expose misinformation, help reveal how algorithms work and their biases, improve transparency in public life and tax justice, and fight the rise of fascism and the far right.
