Publication: Our Shared Ocean: Science in the Global South for a Sustainable World

Structure : IRD (French National Research Institute for Sustainable Development)

INTRODUCTION

The ocean is a reservoir of biodiversity; it regulates the climate and provides a wealth of resources. It is one of our most essential shared assets. Given the urgent need for international action to preserve it, science must play a leading role.

This book explores major advances in interdisciplinary research on the ecological, economic, and social challenges facing the oceans, which are particularly complex and

prominent in the tropical zone due to the unique characteristics of the oceans in this part of the world.

The aim of this richly illustrated educational book is to highlight the many facets of the ocean, as well as solutions for protecting it, through dialogue among all stakeholders. It will captivate anyone with a passion for science and a desire to understand the complexity of the world.

SUMMARY

Part 1: Evolving Environments

Part 2: Societies Facing the Ocean

Part 3: Toward Sustainable Resources

Part 4: Shared knowledge

Part 5: Toward a new ocean governance

FEATURE

Publisher: IRD Editions

Authors: Various

Series: Major Issues

Publication Date: June 5, 2025
