DEVELOPMENT OF A RETURNABLE FOOD CONTAINER SYSTEM

Structure : ETIC Packaging

Difficulté : facile

Toulouse

Occitanie

ETIC Packaging aims to:

- the implementation of a system of reusable and returnable packaging to replace single-use packaging,
- raising awareness of environmental preservation, particularly through waste reduction,
- promoting the circular and local economy.

The association's ultimate goal is to raise awareness about our consumption patterns in order to trigger a change in habits among consumers and merchants.

It was within the ETIC Emballages association that the "[En Boîte Le Plat](#)" project was created, or how to reintroduce a returnable container system in the takeout sector, which itself accounts for half of marine pollution in terms of waste?
