INTEGRATING TREES INTO AGRICULTURAL LANDSCAPES

Structure : Trees and Civilizations

Difficulté : facile

Occitanie

Who are we?

We are an independent association of committed individuals. We work to integrate trees into agricultural landscapes through an approach firmly rooted in dynamic agronomy and living soils, as well as a holistic and inclusive perspective.

We aspire to autonomous agriculture, proactive solutions, and prevention.

We work to promote and share practices and techniques for soil regeneration and aggradation through vegetation.

Our mission is to foster collective dynamics of theoretical and experiential learning through

facilitating producer groups, organizing workshops, working groups, and customized training sessions.

We also provide expertise and consulting in the fields of agroecology and agroforestry, and support project leaders in their agroecological transition.
