#community #experimentation

Introducing permaculture to schoolchildren through fun activities

Structure : La Koukaloka

Difficulté : facile

Montauban

In our quest for a more equitable world, we are committed to creating a haven for biodiversity. Our project aims to lay the foundations for resilience and self-sufficiency, with an emphasis on accessibility, respect for life, and ease of replication. We offer support to individuals, businesses, and educational institutions wishing to engage in a concrete ecological transition.

A shared home

We are Nathalie and Léo! We live in this house, which we are passionately renovating to create three additional bedrooms. Our goal is to allow anyone who wishes to do so to enjoy the experience of community living. We place great importance on preserving and restoring this historic building. Taking on this challenge is a real feat!

A permaculture garden...

Let’s highlight the benefits this place offers, starting with a stroll through the Mandala Garden! This garden, designed using permaculture and syntropy, is the first project focused on planting and self-sufficiency.

Tools that can be replicated

What interests us is giving everyone simple tools to be active participants in a dynamic daily life. No ready-made miracle solutions, but a collective learning process about the reality on the ground in order to regenerate the environment together.
