## RAISING AWARENESS OF GREEN BUILDING

Structure : EcoBatissons

Difficulté : facile

Officially founded in 2016 by about fifteen enthusiastic pioneers, Ecobatissons has gradually become a leading partner for eco-construction in the PACA region.

Supported by various partners and building a solid network of connections around us, we continue to come together in joy and good spirits to work collectively toward making eco-construction accessible to everyone in our region!

From design to construction, including the production of organic and geosourced materials, we come together as professionals for friendly gatherings to share our expertise, work as a team, and support one another in our practices.

We organize annual trade shows to showcase our trades, meet with homeowners, and raise awareness among people of all ages through workshops, conferences, and presentations sharing our experiences.

We are convinced that construction is dependent on its local area and its resources. Therefore, we are committed to supporting the development of local sectors by connecting and fostering synergy among all stakeholders.

Les EcoBatissonS is an association that brings together project leaders and selected professionals who:

- practice, wish to practice, and/or support eco-construction and the development of eco-materials (of natural origin);
- reside in the PACA region;

- work toward a more social and solidarity-based economy.

We act collectively to make eco-construction and eco-renovation more accessible in our region:

- through awareness-raising and educational initiatives on eco-construction for various stakeholders: conferences, thematic roundtables;
- by organizing our trade shows and events with our local partners several times a year;
- through a network for exchange and mutual support among network members;
- through a directory of local, qualified, and committed trainers and professionals;
- through a space for innovation and experimentation, open to all.

## **BY AND FOR COMMITTED PROFESSIONALS!**

From conception to implementation, including the production of bio- and geo-sourced materials, we come together as professionals for friendly gatherings to share our expertise, collaborate, and support one another in our work.

## **RAISING AWARENESS For young and old alike!**

We organize annual fairs to showcase our professions, meet the public, and raise awareness among people of all ages through workshops, conferences, and presentations sharing experiences.

## **AND FOR INDUSTRY DEVELOPMENT**

We are convinced that the construction industry is dependent on its local area and its resources.

Therefore, we are committed to supporting the development of local sectors by connecting all stakeholders and fostering collaboration.
