Promote organic farming and fair trade

Structure : Organic

Difficulté : facile

Grimaud

Bio-Logiques was founded in 1998 out of a growing awareness of the need for healthier eating—an example of how our illnesses and/or challenges drive us to change and grow. It has been proven that if we eat organic food and lead a healthy lifestyle, our health improves. Today, far more than our own health, it is the health of the entire planet that we must improve. Eating organic is a gesture for the planet!

Bio-Logiques means “the logic of life,” and our association, without pretension, seeks to explore and promote all alternative approaches that lead to our well-being, “thinking better,” and “acting better.”

Objectives of the association:

Promote organic agriculture, fair trade, and an alternative, solidarity-based, and sustainable economy

- To defend the environment and healthy, natural food
- Engage in local initiatives and discussions: school outreach, support for new producers
- Support the development and creation of local alternative businesses. Foster the emergence of partnerships and networks
