## TO LEARN, FROM CHILDHOOD ONWARD, THROUGH PLAY AND EXPERIMENTATION, ABOUT THE CRITERIA FOR HEALTHY BUILDINGS

Structure : THUMBELIN

Ales

Occitanie

Bati Poucet is part of the **Gard Environmental Education Network**

Public outings focused on architecture and nature, school outreach programs, workshops related to schoolyard construction projects, and more—all these are ways to help children, from an early age, understand—through play and experimentation—the criteria for buildings that are healthy, comfortable, energy-efficient, eco-friendly, and beautiful.

Indoor air and water quality, thermal, visual, and acoustic comfort, and the use of natural and eco-friendly materials that support well-being are among the criteria explored during these activities

## Main Areas of Activity

- — Information, communication, and awareness-raising
- — Education, outreach, and mediation
- — Training

**Bonus:** A fun trail between the Verrerie d'Alès and the forest overlooking it will answer our questions: Why build with wood? Which tree species are used? What is the impact on the forest?

For all ages 7 and up
