IMPLEMENTATION OF HOUSING AND LAND-USE PROJECTS WITH A MINIMAL ECOLOGICAL FOOTPRINT

Structure : OMAH LAB

Alès

Occitanie

Bringing life, the city, and living things into harmony. That is the vision of Omahlab, the think tank dedicated to sustainable regional planning. Since 2023, we have been working alongside local governments to create concrete projects that are innovative and inclusive.

The OMAH Lab association embodies an innovative approach aimed at creating ecozones that embody sustainability, accessibility, and resilience.

Our primary mission is to collaborate closely with local governments to develop innovative urban planning, supported by territorial and human synergy that integrates ecological, economic, and social challenges.

As an innovation lab, we are dedicated to implementing housing and land-use projects with a minimal ecological footprint, while promoting the pooling of resources and strengthening ties among the region's key stakeholders.

Our support takes the form of multifaceted assistance to local communities, ranging from needs assessments to project implementation and monitoring, including securing necessary funding and engaging local stakeholders.

At OMAH Lab, we firmly believe that fostering housing in harmony with nature—while placing people at the heart of our efforts—is the key to preserving the environment, promoting well-being and community life, and making our ecozones fertile ground for a sustainable and inclusive future for everyone.

OUR INITIATIVES: Designing modular, demountable, low-carbon, self-sufficient housing for communities and individuals
