To connect producers of aromatic and medicinal plants with a range of other professionals and enthusiasts

Structure : PAM-MTC Network

Alès | Occitanie

A network connecting growers of medicinal plants and herbal practitioners. Research, experimentation, plant propagation, and the dissemination of knowledge to promote a contemporary, pragmatic, resilient, and evolving approach to herbalism inspired by Asian tradition.

In summary: The ***PAM-TCM Network*** aims to connect producers of **aromatic and medicinal plants** (PAM), health practitioners trained in herbal medicine as described by Traditional Chinese Medicine (TCM), and a range of other professionals and enthusiasts at the intersection of these two fields.

Through documentary research, cultural exploration, and cultivation experiments, our objectives focus on the conservation of cultivated biodiversity and the dissemination of knowledge regarding the practical application of a pragmatic, resilient, and evolving herbalism, grounded in practices derived from Asian traditions.

___

In detail: The PAM-TCM Network Association is dedicated to cultural transmission and technical experimentation to promote the cultivation, in France and Europe, of high-quality Asian medicinal plants, with a focus on small-scale, sustainable, and relevant agriculture.

Its initial goal is to connect growers of aromatic and medicinal plants (PAM) with practitioners of traditional herbal medicine—particularly that derived from Traditional Chinese Medicine (TCM)—within a shared framework of cultural transmission and technical experimentation (cultivation, processing).

More broadly, it is intended for any individual or organization interested in the research, experimentation, production, dissemination, and practice of local, pragmatic, and contemporary herbalism.

___

In 2025–2026, we will initiate experimental cultivation of several plants, including Scutellaria baicalensis, Salvia miltiorrhyza, Angelica dahurica, Codonopsis pilosula, and others.

Growers, gardeners, and researchers interested in participating in these protocols are welcome

Whether you are a farmer, herbalist, practitioner, student, researcher, or simply a gardener—or even a professional organization, training institution, distributor, laboratory, or botanical garden—

Join us to help create a French-speaking network for research, experimentation, and local production of Asian medicinal plants used in Traditional Chinese Medicine.
