Turning Local Plastic Waste into Sustainable Products and Raising Environmental Awareness

Structure : PLAST NAT ASSO

Lisieux | Normandy

We transform local plastic waste into sustainable objects and raise environmental awareness among people of all ages through fun, hands-on workshops.

Our mission:
To transform plastic waste into useful, sustainable, and stylish items, while raising awareness through educational workshops titled “From Waste to Object.”

Through our mobile plastic recycling workshop, we partner with schools, organizations, local governments, and businesses to illustrate the principles of the circular economy and the energy transition.

At PlastNat, we believe in boldness, education, and creativity to reduce our environmental

impact and change the way we view plastic.

Open House at PlastNat!

In response to your many messages and interest in our workshop… we've heard you! Normally, our workshop is not open to the public. It's a community-run workshop where every item is handcrafted under strict safety guidelines.
As a special exception, we're opening our doors for a day dedicated to exploring our world:

On the agenda:

- Guided tours of the workshop
- Self-guided tours of the workshop (Closes at 6 p.m.)
- Meet the volunteers
- Learn about our recycling process
- Shop corner—items at "straight-from-the-workshop" prices

You'll see firsthand how we collect, sort, shred, and transform plastic into useful and durable items.

Important

: The workshop remains an active workspace where production is taking place so that everyone can see behind the scenes; children must be accompanied and supervised

EDUCATIONAL

WORKSHOPS At Plastnat, we offer fun and educational workshops for children from preschool through elementary school. Our goal: to learn while having fun, all while raising awareness about protecting nature and animals.

An educational workshop is a special opportunity to spark children's curiosity and develop their skills through:

- Creative and sensory activities.
- Educational games focused on nature and recycling.
- Hands-on learning about respecting the environment and animals.

Our workshops are designed to be fun, educational, and eco-friendly.
