PROMOTING ECO-FRIENDLY CONSTRUCTION AND RENOVATION USING RAW EARTH

Structure : GROUND LEVEL

Marseille

Provence-Alpes-
Côte d'Azur

Raz-de-Terre is an organization dedicated to promoting and developing eco-friendly construction and renovation using raw earth in the Marseille region.

?

Our brickworks, a small-scale, local artisanal operation, allows us to provide building materials made from locally excavated earth.

?

Through our outreach efforts, we help a wide audience discover, rediscover, or deepen their

understanding of earth as a building material.

?

OUR SERVICES

Supported Self-Renovation (ARA)

We work alongside residents to help them improve their homes at their own pace and according to their needs. We provide technical and educational support to facilitate the use of earthen materials

On-Site

Implementation We support you in bringing your project to life by carrying out the construction of raw earth structures:

- Masonry
- Plastering
- Lightweight Construction

Supervision of participatory

construction sites We support individuals and groups in carrying out their earthen construction projects through participatory work sites. Our role is to share our expertise, organize the project phases, and ensure the proper implementation of the techniques
